

International SpaceCRAFT Exploration Challenge

For more than a half-century, Space Exploration has been an inspirational force in our society toward the development and application of science and engineering. The International SpaceCRAFT Exploration Challenge gives students an incredible opportunity to participate virtually in space exploration.

Space Teams is searching for young astronauts Australia. From July 4th to 9th, international teams will compete on the global stage in this virtual space mission.

As part of a mission team, students will design spacecraft, navigate to another planet, land their vehicle, build a planetary habitat, and explore a new planet to find resources to sustain human life. Students will have lessons from subject matter experts including astronauts, scientists and engineers who are directly involved in ongoing missions as they compete with other teams for the best mission design. These topics range from planetary science to spacecraft systems, orbital mechanics to robotic exploration.
